

ABSTRACT OF THE DISCLOSURE

[00019] A rubber mounting, in particular for a motor-driven pump unit of a power steering system, the rubber mounting has a holding flange, a bolt which starts to extend from the holding flange, a rubber element disposed on the bolt, and a fastening eye disposed on the rubber element. The bolt is waisted so that a particularly high flexibility of the rubber mounting in the case of movements in a plane perpendicular to the longitudinal axis of the bolt is achieved.
